

## Emergency Management

### **Introduction**

All jurisdictions require surface extraction operations to plan for emergency situations and ensure those plans are tested for effectiveness.

This PDP has been designed to provide participants with the knowledge to develop and test robust emergency management plans.

### **Duration**

1 Day

### **Potential Participants**

Suitable for Quarry Managers, Quarry Supervisors, safety personnel and others with Emergency Management roles and responsibilities.

### **CPD Points**

7 CPD Points

### **Topics Covered**

The PDP outline is as follows:

1. Introduction to Emergency Management.
2. Emergency Management Planning.
3. Roles and Responsibilities
4. Testing Emergency Plans.
5. Audit and Review.

Upon successful completion of this PDP, participants will have the knowledge to:

1. Understand what constitutes an emergency;
2. How to effectively plan for a wide range of emergencies in a surface extraction environment;
3. Understand the roles and responsibilities of individuals and teams in planning and responding to emergencies;
4. How to test the plan for effectiveness in both a desktop and practical, scenario based environment.
5. The role of audit and review in ensuring Emergency Plans remain current and effective.
