

## Conveyors

### **Introduction**

Condition Monitoring of Conveyors provides a practical and snapshot troubleshooting guide into several of the issues that bulk material handling sites witness on a regular basis.

Although a seemingly small part of a large process, conveyors when not maintained and/or operating efficiently can result in large downtime or capital expense.

This webinar aims to provide a troubleshooting approach to preventative conveyor maintenance touching on several key elements of belt tracking, cleaning and skirting, ultimately focusing on improving system productivity.

### **Duration**

1 hour

### **Potential Participants**

Quarry Managers, Supervisors and Maintenance Staff.  
Contracting workers who provide site services in relevance to conveyor audits

### **Topics Covered**

- A general understanding outline of the conveyor system
- Troubleshooting of conveyor components – idlers and belt.
- Recommended guide to Belt cleaning, Tracking and transfer versus transition points.

### **Facilitator**

Sean Kinder
