

Cost Management for Quarry Operations

Introduction Overview of cost definitions, management techniques, and systems to improve cost visibility in a quarry operation.

With increased pressure on productivity, profitability, efficiency, and asset utilisation, the focus on cost control has never been more important. Quarry Managers are the frontline in cost management. Daily decisions directly influence monthly profit outcomes. This webinar defines the various cost terms used in the industry, discusses how they are influenced, and provides potential system solutions to increase cost and performance visibility.

Duration 1 hour

Potential Participants Suitable for Quarry Managers, Quarry Supervisors, and Operational Management employed or seeking employment in the industry.

Topics Covered

1. Cost types, definitions, and how to influence.
2. Process costing.
3. Activity based costing system and model.

Facilitator Richard Ernst
