

Emergency Management

Introduction

Emergency Planning is a critical tool to ensure that in the event that an emergency occurs within your extractive operation there is a clear plan and delineation of what is to happen and by whom.

In the event an Emergency incident is realised onsite, it is a natural occurrence that some personnel panic and can at times make decisions that may not be of sound judgement to protect the affected area or person.

This wPDP will provide the applicant with an understanding of what management plans, site based training and support tools are available in the quarrying industry to assist management and operators manage the site in the event of an emergency occurring.
