

Environmental Management

Introduction

Environmental Management is a key consideration in managing an extractive industry operation. Everyone has a responsibility with respect to managing the environment and there are a number of key aspects which should be considered whilst conducting extractive operations to ensure the environment is protected, licences or approvals are maintained and community expectations are met.

This wPDP will provide an awareness of environmental issues across the quarry industry and provide practical measures and strategies to assist in managing these issues.

Duration

1 hour

Potential Participants

- Senior Managers (Operations Managers)
- Quarry Managers
- Quarry Supervisors
- Environmental professionals

Topics Covered
